## THE COMPANY

### About Us

Ebslon Infotech was founded in the year 2016, with the vision to think strategically, contribute significantly, work independently, and deliver strong and fast knowledge. The company is powered by a growing portfolio of specialized IT solutions addressing critical business challenges, including Web Designing Digital Marketing, Web Development, Web Hosting, App Development.

We at Ebslon Infotech strongly believe that a big gap exists in the IT industry that needs to be filled up. The greatest gap arises out of the differences between the consumer needs and available industry solution. We are committed and perennially strive for bringing better IT solutions and working on a mission mode towards our goal to eliminate the gap through digital innovations. Considering the pivotal role of IT industry in dealing with key issues having local to global significance, we treat dedication as our commitment.

The company provides solutions to enterprises and services through a combination of traditional and newer IT solutions for bringing a synergetic effect. Our company has demonstrable experience in customized software development and database application development.

Ebslon is a global software technology solutions and recruitment service provider company with 100+ dedicated personnel. Based in India, we are a professionally recognized software development company having experience, exposure and expertise in developing need-based IT solutions. Our core team provides the professional expertise needed to develop an integrated technology solution.

Ebslon is not just a company but a mission that aims at tapping the clients' needs. Accordingly, our skilled programmers create innovative, end-to-end IT solution that is highly unique and customized.

## WHAT WE OFFER

### Our Solutions

#### ERP

## ERP

### "Unified Business Processes: Our Comprehensive ERP Solutions"

At Ebslon Infotech Pvt. Ltd., we understand the importance of seamless business processes and the role they play in your success. We offer comprehensive ERP solutions designed to integrate and streamline your business operations across various departments. From procurement to sales, finance to inventory management, our ERP systems provide a unified platform that centralizes, standardizes, and automates business processes, resulting in significant time and cost savings. Whether you're a small business looking for your first ERP system or a large corporation needing a more robust solution, our ERP solutions are scalable, customizable, and designed to meet your specific needs.

In today's fast-paced business environment, an effective ERP system can make the difference between success and failure. The benefits of implementing an ERP system in your business are manifold. It streamlines your business processes, eliminating redundancies and improving efficiency. With real-time, accurate information at your fingertips, you can make informed business decisions quickly. An ERP system enhances customer service by providing improved access to customer information, enabling you to respond promptly to customer needs. It increases operational efficiency by automating routine tasks, freeing up your workforce to focus on strategic activities. Lastly, it provides invaluable business intelligence, offering insights that can facilitate strategic planning and decision-making.

### The Strategic Value of Integrated ERP Systems in Business Operations

## ED TECH

### "Educational Innovation at Your Fingertips: Our Ed-Tech Portal Solutions"

In today's digital age, education has transcended the physical boundaries of classrooms. At Ebslon Infotech Pvt. Ltd., we build innovative Ed-Tech portals designed to bring learning to the fingertips of learners. Leveraging cutting-edge technologies, our portals offer a wide range of features, including online courses, interactive content, virtual classrooms, and analytics. Our aim is to make education more accessible, engaging, and effective for everyone, regardless of their geographical location. Ed-Tech portals hold immense potential for educational institutions, offering a multitude of benefits. They facilitate distance learning and online education, breaking geographical barriers and making education accessible to anyone with an internet connection. By incorporating interactive features like videos, quizzes, and games, Ed-Tech portals can make learning more engaging and fun for students. They provide learners with a vast array of resources and materials at their fingertips, allowing for a more comprehensive and in-depth learning experience. Moreover, Ed-Tech portals enable tracking and analytics of learner progress and performance, providing insights that can be used to improve teaching methods and curricula.

# 01 CASE STUDY

## MEERUT FINE TAILORS

Project Type:

ERP

Technologies used

### Company Overview

Meerut Fine Tailors is a well-established company involved in the manufacturing and supplying of an exclusive collection of Formal Trousers, Designer Sherwani, Kurta Pajama, Club T-Shirt, Men's Shirts, and Formal Suits. The company prides itself on its commitment to quality, style, and customer satisfaction.

### Project Overview

The ERP solution developed for Meerut Fine Tailors is a web-based application that simplifies the garment production process from order creation to final delivery. With unique QR codes for each order, customers can track their orders in real-time, while salespersons, tailors, and factory heads have access to detailed order information to ensure efficient workflow and quality control. The system also includes a comprehensive measurement recording system to ensure accurate and consistent measurements for each garment, reducing the risk of errors and ensuring a perfect fit for each customer. Overall, the ERP solution enhances operations and improves customer satisfaction.

## Problem

Meerut Fine Tailors was facing challenges in managing their growing customer base and ensuring a seamless flow of information across the multiple stages of garment production. The company needed a comprehensive ERP solution to streamline their operations and enhance their customer experience.

## Solution

An ERP solution was developed and implemented specifically for Meerut Fine Tailors to address their unique needs. The system provided a centralized platform to manage customer orders and track the progress of each garment throughout the production process. The ERP solution included the following key features:

1. **Order Creation:** Salespersons create orders by entering customer details and selecting the type of garment required. The system generates a QR code for each order, which can be scanned at each stage to access relevant information.
2. **Measurements:** A designated person takes the customer's measurements and saves them on the portal, linking them to the customer's account. This data is readily available for future orders or alterations.
3. **Fabric Cutter:** The fabric is cut according to the customer's order and design requirements, ensuring precision and minimizing waste.
4. **Fabric Collector:** The cut fabric pieces are collected and organized, ready to be passed on to the next stage of production.
5. **Trims:** Necessary trims and accessories are sourced and allocated to each order.
6. **Factory Head:** The factory head oversees the production process, ensuring smooth workflow and adherence to quality standards.
7. **Tailor:** The tailor stitches the garment according to the design and measurements provided.
8. **Quality Check:** Each garment undergoes a thorough quality check to ensure it meets the company's high standards.
9. **Trials:** Customers are invited for a fitting to ensure the garment fits perfectly and meets their expectations.
10. **Alteration:** If required, alterations are made to the garment to achieve the perfect fit.
11. **In-house:** The completed garment is stored in the company's inventory, ready for delivery or collection by the customer.

## Result

The implementation of the ERP solution led to significant improvements in Meerut Fine Tailors' operations:

- **Enhanced customer experience:** The system allowed for quicker order processing and more accurate tracking of customer preferences and measurements.
- **Streamlined workflow:** The ERP solution ensured a smooth flow of information across all stages of garment production, reducing delays and increasing overall efficiency.
- **Improved quality control:** The system facilitated better oversight of the production process, allowing for faster identification and correction of issues.
- **Time and cost savings:** Automation of various tasks and more efficient resource allocation led to reduced production times and cost savings for the company.

## Conclusion

The ERP solution developed for Meerut Fine Tailors successfully addressed their operational challenges, leading to improved efficiency, quality control, and customer satisfaction. The system's centralized platform allowed for seamless information flow across the multiple stages of garment production, ensuring a streamlined workflow and more accurate tracking of customer preferences and measurements.

## Testimonials

**SAMIR KHAN**  
MEERUT FINE TAILORS

I used to struggle with managing my custom tailoring business until I discovered Ebslon Infotech's ERP system. It's been a game-changer!  
The system is easy to use and customized to fit my unique business needs. It saves me so much time and has improved communication with my customers. Real-time tracking of production progress has also led to increased customer satisfaction.

# 02 CASE STUDY

## FASTO

Project Type:

Mobile Application

Technologies used

## Company Overview

Fasto is a leading mobile application designed to revolutionize the shopping experience by combining groceries, stationery, and other essential products into a single platform. With a user-friendly interface and a focus on convenience, Fasto aims to provide a seamless and efficient shopping solution for busy individuals and families.

### Project Overview

Fasto embarked on a mission to create a comprehensive shopping app that would simplify the process of purchasing groceries and stationery items. The project aimed to address the challenges of managing multiple shopping apps, difficulty tracking subscriptions, and inefficient payment processes.

## **Problem**

Prior to Fasto, users often found themselves juggling multiple apps for different shopping needs, leading to confusion and inefficiency. Tracking subscriptions across various platforms was cumbersome and time-consuming. Additionally, traditional payment processes involved repetitive data entry and posed security concerns for users.

## **Solution**

Fasto approached these problems head-on with innovative solutions. They developed a unified platform that brought together groceries, stationery, and other essential products, eliminating the need for multiple apps. The introduction of a subscription feature allowed users to easily manage and track their subscriptions within the Fasto app. To address payment inefficiencies, Fasto integrated a digital wallet that streamlined the payment process, eliminating the need for repetitive data entry and enhancing security.

## **Result**

The implementation of Fasto's solutions led to significant improvements in the shopping experience. Users no longer had to navigate multiple apps but could find all their essential items in one place. The subscription feature simplified the management of recurring purchases, ensuring users never ran out of their frequently bought items. The integrated digital wallet provided a secure and efficient payment method, saving users time during checkout.

## **Conclusion**

Fasto successfully achieved its objective of creating a comprehensive shopping app that simplified grocery and stationery shopping. By addressing the problems of managing multiple apps, tracking subscriptions, and inefficient payment processes, Fasto improved the overall user experience. The convenience, variety, and seamless payments offered by Fasto positioned it as a valuable tool for busy individuals and families seeking an efficient shopping solution.

## Testimonials

**VARDHAAN**

FASTO

This case study showcases how Fasto's innovative approach to combining essential products into a unified platform, along with its focus on convenience and seamless payments, resulted in a positive impact on the user experience and ultimately met the needs of its target audience.

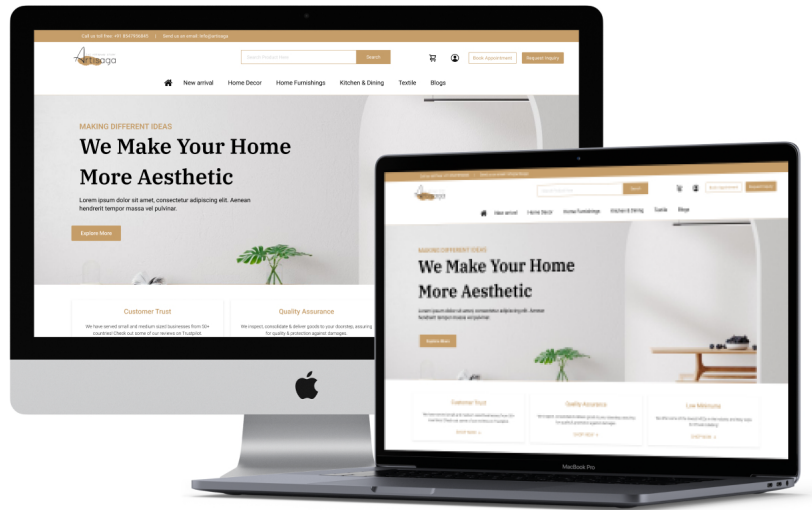

# 03 CASE STUDY

## MOMPORIUM

Project Type:

Marketplace

Technologies used

[Full View](#)

## Company Overview

Momporium was founded by a team of dedicated parents who recognized a gap in the market for an easy-to-use platform that catered specifically to the needs of parents, caregivers, and expectant mothers. The company's mission is to provide an affordable and convenient solution for buying and selling new and used baby products and products for moms-to-be, while also creating a community of support and knowledge-sharing among its users.

### Project Overview

The project aimed to create an intuitive and user-friendly online marketplace, Momporium, with features such as product listings, bidding, secure payment processing, and chat functionality. The platform would serve as a hub for users to buy, sell, or bid on new and used baby products and products for moms-to-be, with a focus on quality, affordability, and ease of use.

## Problem

1. **Market saturation:** The online marketplace industry is highly competitive, with many established players catering to a wide range of consumer needs. Breaking into the market and differentiating Momporium from other platforms was a major challenge.
2. **Trust and safety concerns:** Ensuring the safety and authenticity of products, especially used baby products, was a major concern for potential users. Building trust in the platform was critical for its success.
3. **User acquisition and retention:** Attracting and retaining a large user base was essential for the platform's sustainability and growth.

## Solution

1. **Niche targeting and branding:** Momporium focused on catering specifically to parents, caregivers, and expectant mothers, carving out a niche in the market. The branding and marketing efforts emphasized the platform's unique selling points, such as affordability, convenience, and a sense of community.
2. **Rigorous vetting and quality control:** Momporium implemented strict quality control measures, such as verifying sellers, requiring detailed product descriptions, and encouraging user reviews. The platform also provided guidelines for users on how to safely buy and sell used baby products.
3. **Community-building and user engagement:** Momporium fostered a strong sense of community among its users through chat functionality, social media engagement, and knowledge-sharing resources such as blog posts and webinars. These efforts helped to create a loyal user base that continued to grow organically.

## Result

Since its launch, Momporium has successfully attracted a substantial user base, with thousands of buyers and sellers engaging with the platform each month. The marketplace has become renowned for its affordable, high-quality products and its strong community of users who consistently exchange advice and personal experiences.

## Conclusion

Momporium's case study demonstrates the importance of understanding market needs, carving out a niche, and building trust with users. By focusing on the specific needs of parents, caregivers, and expectant mothers, Momporium was able to differentiate itself from competitors and build a thriving online marketplace. By addressing safety concerns and fostering a sense of community, the platform has successfully attracted and retained a loyal user base, ensuring its continued growth and success.

## Testimonials

**SWATI GUPTA**

DIRECTOR (MOMPORIUM E-COMMERCE PRIVATE LIMITED)

Partnering With Ebslon Infotech To Develop Momporium Was One Of The Best Decisions We Made. Their Exceptional Understanding Of Our Vision And Relentless Dedication Led To A Marketplace That Has Genuinely Revolutionized How Parents And Expectant Mothers Buy And Sell Baby Products.

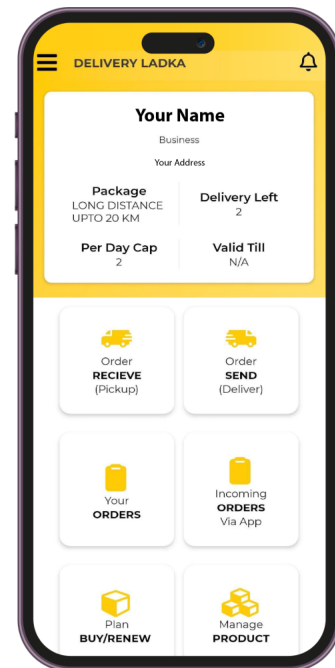

# 04 CASE STUDY

## DELIVERY LADKA

Project Type:

Mobile Application

Technologies used

## Project Overview

The project was to develop an innovative application, Delivery Ladka, aimed at revolutionizing the hyperlocal delivery market. The application would serve as an interface between local vendors and customers, ensuring delivery of products from any store to any location. It intended to provide a more cost-effective delivery system and support for small and medium-sized businesses, all while promoting the local economy.

### Problem

Small and medium-sized businesses, especially local vendors, found it challenging to transition to digital platforms due to high commission charges by third-party delivery apps. This left them with reduced profits and hindered their capacity to offer competitive prices. Additionally, customers craved a convenient, quick, and cost-effective delivery solution that provided a wide range of local products.

## **Solution**

The proposed solution was the Delivery Ladka mobile application. The application's key selling point was its zero-commission model, with a fixed monthly fee for vendors instead of commission on every order. This approach empowered local vendors to embrace the digital revolution without losing a significant portion of their income.

The app was designed to offer a wide range of products from local stores. The end consumers could order almost anything from the comfort of their homes. Furthermore, the delivery radius of up to 5 km for each shop enabled the reach of local shops to extend beyond their regular walk-in customers.

## **Result**

Post the development and successful deployment of the Delivery Ladka app, there was a significant positive impact on the hyperlocal delivery market:

Small and medium businesses reported an increase in order volume and customer reach, reducing their overall cost of delivery.

The zero-commission model was welcomed by local vendors who could now offer competitive prices to their customers.

Customers appreciated the convenience and cost-effectiveness of the app, reporting high satisfaction with the wide range of available local products and quick delivery times.

The app gained a significant user base in a short period, testifying to its successful market fit and acceptance.

## **Conclusion**

The development of the Delivery Ladka mobile application has proven to be a successful venture, bridging the gap between local vendors and their customers. By introducing a zero-commission model, it has brought about a paradigm shift in how local vendors view digital platforms for business growth.

The success of Delivery Ladka signifies the immense potential of innovative solutions in the hyperlocal delivery market. Future enhancements and continuous improvements based on user feedback will further solidify its position as a leading player in the market.

## Testimonials

**SUNIL BHATIA**

DELIVERY LADKA

Team Ebslon brilliantly transformed our vision into reality with the Delivery Ladka app. Their dedication to excellence and understanding of our needs made the difference. We couldn't be happier with the outcome.

# 05 CASE STUDY

## FLIPTRIP

Project Type:

Travel CRM

Technologies used

## Company Overview

Fliptrip is a leading travel agency specialising in designing custom international packages for clients based on their unique preferences and requirements. With a wide range of services including air tickets, hotel bookings, sightseeing, visa assistance, and airport transfers, they strive to provide a seamless and memorable travel experience for their customers.

## Project Overview

Fliptrip sought to implement a Customer Relationship Management (CRM) system to efficiently manage the status of each lead for custom packages and itineraries while keeping track of the profit and loss for each lead.

## Problem

1. The company faced challenges in efficiently managing and tracking the status of each lead for custom packages and itineraries.
2. The existing manual process of managing leads was time-consuming and prone to errors.
3. Difficulty in analyzing the profit and loss for each lead, affecting the company's overall profitability and decision-making.
4. Inefficient communication between the sales team, travel agents, and customers, leading to delays and dissatisfaction.
5. Lack of a centralized system to manage customer information, preferences, and travel history.

## Solution

Fliptrip collaborated with us to create a customized CRM system that addressed their unique requirements. The CRM system included:

1. A centralized database to store customer information, preferences, and travel history.
2. Customizable lead management to track the status of each lead for custom packages and itineraries.
3. Automated profit and loss analysis for each lead, aiding in better decision-making.
4. Integration of the CRM with the company's existing booking and reservation systems to ensure a seamless flow of information.
5. Efficient communication channels within the CRM to facilitate better collaboration between the sales team, travel agents, and customers.
6. Dashboard and reporting features to provide real-time insights into lead conversion rates, sales performance, and overall business performance.

## Result

1. Improved lead management and tracking, resulting in a higher lead conversion rate.
2. Streamlined communication between the sales team, travel agents, and customers, enhancing customer satisfaction.
3. Reduced manual errors and time spent on managing leads, allowing the team to focus on providing personalized services to their clients.
4. Accurate profit and loss analysis for each lead, empowering TravelExplorer Inc. to make data-driven decisions to improve profitability.
5. Better insights into customer preferences, enabling the company to create more tailored packages and itineraries.

## Conclusion

The implementation of the customized CRM system at Fliptrip significantly improved the efficiency of their lead management process and enhanced overall customer satisfaction. By providing real-time insights into profit and loss for each lead, the CRM system empowered the company to make informed decisions to optimize profitability. The streamlined communication and centralized database helped the team deliver highly personalized travel experiences, reinforcing Fliptrip's position as a leading travel agency specializing in custom international packages.

## Testimonials

**AKSHAY**  
FLIPTRIP HOLIDAYS

Working with Ebslon Infotech has been an absolute pleasure. They understood our requirements perfectly and delivered a custom Travel CRM that exceeded our expectations. The level of professionalism and commitment they showed throughout the project was truly remarkable.

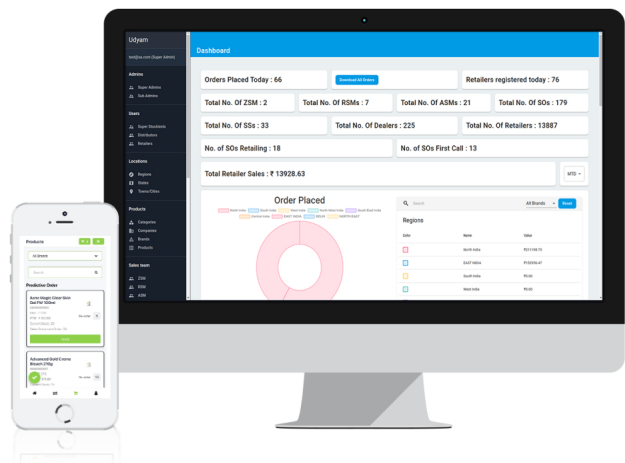

# 06 CASE STUDY

## UDYAM

**Project Type:**

Supply Chain Management ERP

**Technologies used**

## Company Overview

Udyam is an innovative supply chain management company dedicated to transforming the distribution of Fast-Moving Consumer Goods (FMCG) in India. By developing a comprehensive platform that connects brands, super stockists, distributors, and retailers, Udyam fosters seamless communication and coordination across the supply chain. The platform, which includes web panels and mobile apps, leverages advanced technologies such as Node.js, React.js, MongoDB, artificial intelligence, and geolocation tracking to optimize the FMCG distribution process and improve overall efficiency. Udyam's mission is to provide a centralized and transparent platform that drives growth in the Indian FMCG market and establishes the company as a leading player in the country's supply chain management landscape.

## Project Overview

Udyam is an innovative supply chain management project designed to manage and optimize the distribution of Fast-Moving Consumer Goods (FMCG) from brands like Revlon and Hamdard across India. The project facilitates seamless communication and coordination among brands, super stockists, distributors, and retailers via an integrated platform, including web panels and two mobile apps. Udyam employs a hierarchy of Zone Sales Managers (ZSM), Regional Sales Managers (RSM), Area Sales Managers (ASM), and Sales Managers (SM) to maintain a streamlined flow of orders at every level. Developed using Node.js, React.js, and MongoDB, Udyam aims to improve the overall efficiency of India's FMCG supply chain.

## Problem

The Indian FMCG distribution landscape is marked by a complex network of stakeholders, often resulting in inefficiencies, delays, and mismanagement. Prior to Udyam, there was no centralized platform that could enable transparent and real-time communication between brands, super stockists, distributors, and retailers. This lack of visibility and coordination led to bottlenecks, hindering the growth and potential of the FMCG market in India.

## Solution

Udyam offers a comprehensive solution through web panels and two mobile apps, addressing the challenges in the FMCG supply chain:

**Web Panels:** Udyam provides web panels for ZSMs, RSMs, ASMs, brands, super stockists, and distributors to manage orders and track the progress of the distribution process.

**Sales Managers App:** This mobile app allows SMs to: a. View assigned retailers in their beat b. Place orders on behalf of retailers c. Update retailers' closing stocks during physical visits (geolocation tracking verifies on-site presence) d. Utilize an AI-driven model to predict order quantities based on historical sales and purchase data

**Retailers App:** This mobile app empowers retailers to: a. Place orders, update closing stocks, and view predictive orders b. Access their complete order history for improved inventory management

## Result

Udyam has significantly transformed the FMCG supply chain in India, delivering the following outcomes:

1. **Increased Transparency:** Real-time information sharing across the platform enhances coordination and reduces miscommunication among stakeholders.
2. **Enhanced Efficiency:** By automating order prediction and streamlining the ordering process, Udyam minimizes delays and prevents stockouts.
3. **Improved Accountability:** Geolocation tracking of SMs during retailer visits ensures accurate inventory updates and better sales support.
4. **Data-Driven Decision-Making:** Comprehensive order history and AI-generated predictions enable retailers to make informed inventory management decisions.

## Conclusion

Udyam has successfully revolutionized the FMCG supply chain in India by providing a centralized platform for seamless communication and coordination among brands, super stockists, distributors, and retailers. Leveraging state-of-the-art technologies, such as AI and geolocation tracking, Udyam has improved the efficiency and transparency of the distribution process, paving the way for further growth and development of the Indian FMCG market.

## Testimonials

**ARSHAD SIDDIQUI**

UDYAM (CAPL)

I can't thank Ebslon Infotech enough for their incredible work on our Udyam App and ERP. Their team was highly skilled and professional, always willing to go above and beyond to ensure our project was a success. Thanks to their expertise, we were able to streamline our operations, increase efficiency, and reduce costs.

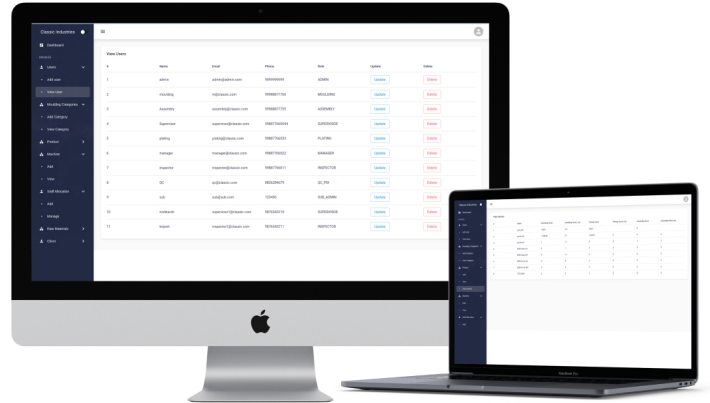

# 07 CASE STUDY

## CLASSIC INDUSTRIES

**Project Type:**

ERP Implementation

**Technologies used**

## Company Overview

Classic Industries, a premier OEM for renowned companies such as Tata, Mahindra, and Kohler, is a benchmark in the production of molding and chrome-plated products. The company's complex operations span across raw material procurement, meticulous storage logistics, intensive production planning, and manufacturing. As the business grew in scale and complexity, the manual management of these operations became increasingly challenging and prone to errors. Recognizing the critical need for a more efficient, integrated system, Classic Industries decided to invest in an Enterprise Resource Planning (ERP) system.

### Project Overview

The objective was to develop a customized ERP system that would serve the specific needs of Classic Industries and facilitate improved management of production, inventory, quality checks, accounts, and jigs maintenance and repair. The company partnered with a reputable ERP solution provider, focusing on a system that would streamline workflows, enhance productivity, and increase efficiency.

## Problem

Classic Industries faced several key challenges that were impeding their growth and operational efficiency:

1. **Manual Processes:** The company's operations were largely manual, which was not only time-consuming but also made them susceptible to errors. Critical tasks like inventory management, production planning, and accounts management lacked real-time tracking and efficient execution.
2. **Inventory Management:** The lack of an efficient system to manage inventory led to difficulties in tracking, increased resource wastage, and substantial materials loss.
3. **Quality Control:** Ensuring consistent product quality across batches was a significant challenge due to the absence of a streamlined quality check process.
4. **Maintenance and Repair:** Without a systematic process, scheduling and tracking machine repairs and maintenance were challenging, leading to extended downtimes and impacting production timelines.

## Solution

Classic Industries' customized ERP system was designed to directly address these challenges:

1. **Automated Processes:** The ERP system was developed to automate key processes, thereby significantly reducing manual errors and boosting operational efficiency.
2. **Improved Inventory Management:** A QR-based tracking system was implemented for real-time inventory tracking. This helped to minimize wastage, reduce materials loss, and enable smoother operations in the storage logistics department.
3. **Enhanced Quality Control:** A dedicated quality check module was incorporated into the ERP system. This enabled more systematic and rigorous quality checks, ensuring that all products met the high-quality standards set by Classic Industries.
4. **Streamlined Maintenance and Repair:** A module for jigs maintenance and repair management was added to the ERP system. This module helped schedule and track machine maintenance, reducing downtime and ensuring smoother manufacturing operations.
5. **Efficient Accounts Management:** The accounts management was automated, leading to significant time savings, reduction in manual errors, and easier financial management.

## Result

Post-implementation of the ERP system, Classic Industries experienced significant improvements in several areas:

1. **Increased Operational Efficiency:** With the automation of several key processes, Classic Industries saw a noticeable increase in operational efficiency, with less time spent on manual tasks and lower chances of errors.
2. **Efficient Inventory Management:** The implementation of a real-time, QR-based tracking system for inventory management resulted in substantial improvements in resource usage. The real-time data helped avoid material wastage, minimize loss, and streamline the overall inventory management process.
3. **Enhanced Quality Control:** The quality check module of the ERP system ensured stringent adherence to product quality standards. This led to a marked decrease in the number of defects and higher overall product quality.
4. **Reduced Downtime:** With the jigs maintenance and repair management module, machine maintenance could be scheduled and tracked efficiently, minimizing downtime and enhancing overall productivity.
5. **Streamlined Accounts Management:** The automation of several tasks within accounts management not only saved considerable time but also significantly reduced errors. This led to more accurate financial

## Conclusion

The successful ERP implementation at Classic Industries demonstrates the power of an integrated system in driving efficiency, enhancing quality control, and streamlining business operations. This project underscores the importance of investing in technology to meet the evolving needs of a growing business, ultimately aiding in sustainable expansion.

## Testimonials

**ANKIT GOYAL**  
HEAD OF UNIT

We partnered with Ebslon Infotech for our ERP system, and they knocked it out of the park! They handled our challenges like pros and completely streamlined our operations at Classic Industries. The team's dedication and service were top-notch. We are genuinely grateful for their help. Can't recommend them enough!

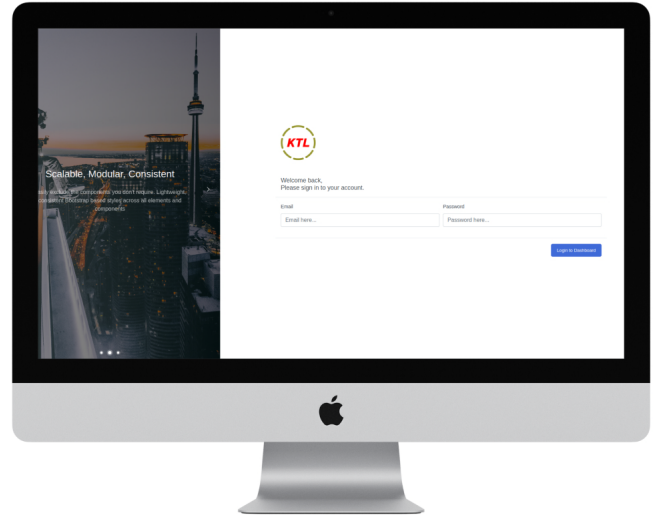

# 08 CASE STUDY

## MERELLI

### Project Type:

Merelli's QR Code-Based PDI Solution for Automobile Gearbox Kits

### Technologies used

## Company Overview

Merelli is a leading automobile manufacturer with a stellar reputation for producing high-quality gearboxes. The company has an extensive production line that caters to a diverse range of clients across the globe. Innovation, quality, and customer satisfaction have been the pillars on which Merelli has built its success.

### Project Overview

Merelli approached our company to develop an on-premise Product Data Integration (PDI) software solution to streamline and automate their gearbox kits assembly process. The goal was to ensure accuracy in kit assembly by matching various parameters such as kit number, manufacturing date, and kit type. The solution was based on the MERN stack (MongoDB, Express.js, React, and Node.js) and involved integrating QR code scanning technology. It also included analytics capabilities and was designed to be deployed across multiple production lines.

## Problem

Merelli's existing production lines relied heavily on manual checking and data entry. This labor-intensive process was not only slow but also prone to human errors. As the company expanded, it became critical to address these challenges. Mismanagement, incorrect kit assembly, and inventory inaccuracies were leading to increased costs and customer dissatisfaction.

## Solution

Our company developed a comprehensive on-premise PDI software solution for Merelli with the following features:

1. **QR Code Integration:** Three QR codes containing data regarding kit number, manufacturing date, kit type, and other parameters were printed on each gearbox kit.
2. **Scanning and Verification:** Scanners installed at various points on the production lines read these QR codes, and the software verified the scanned data.
3. **Database Matching:** The system matched the scanned data against the expected parameters stored in a MongoDB database.
4. **Analytics and Reporting:** The solution included analytics capabilities that provided Merelli with insights into production trends and performance.
5. **Multi-Line Deployment:** The software was deployed across multiple production lines, each with its server for local data processing, which communicated with a central production server.
6. **Real-time Monitoring and Alerts:** The system was capable of monitoring production lines in real-time and sending alerts in case of discrepancies.

## Result

**Increased Accuracy:** The introduction of automated scanning and verification significantly reduced human errors in the assembly process.

1. **Enhanced Efficiency:** The streamlined and automated processes led to quicker assembly lines, reducing production times.
2. **Data-Driven Insights:** Merelli's management could make better-informed decisions with the data analytics provided by the system.
3. **Improved Customer Satisfaction:** The reduction in errors and increased efficiency allowed Merelli to provide higher quality products, which led to higher customer satisfaction levels.

## Conclusion

Our bespoke on-premise PDI solution revolutionized Merelli's gearbox kit assembly process. By integrating QR code technology and analytics capabilities, Merelli was able to significantly reduce errors, enhance efficiency, and gain valuable insights into their production processes. This not only had a positive impact on their bottom line but also bolstered their reputation for delivering high-quality products. The successful implementation of this solution underscores the importance of embracing technology to tackle production challenges and optimize efficiency.

## CASE STUDY

## KTL INDUSTRIES

## Project Type:

Factory Automation for Client Orders, Production  
Machine Automation with Online Job Cards, and  
Dispatch

## Technologies used

## Company Overview

KTL Industries is a well-established manufacturing company that caters to a wide range of clients. With a diverse product portfolio, they receive orders for various products in different quantities and specifications. KTL Industries operates a production floor with multiple machines capable of handling different order sizes. However, managing the production process and scheduling jobs manually became challenging and time-consuming.

## Project Overview

KTL Industries is a manufacturing company specializing in the production of various products. To streamline their operations and enhance efficiency, they decided to implement factory automation systems. The goal was to automate the client order processing, production machine scheduling with online job cards, and dispatch processes. This case study highlights the implementation of these automation systems and the subsequent benefits achieved by KTL Industries.

## Problem

Before implementing automation, KTL Industries faced several challenges in their order fulfillment process. Manual order processing and machine scheduling resulted in inefficiencies and errors. The lack of a streamlined system caused delays in job execution and dispatch, leading to dissatisfied customers. The company recognized the need for an automated solution to overcome these hurdles and improve overall productivity.

## Solution

To address the challenges faced by KTL Industries, an integrated automation system was implemented. The solution comprised three main components: client order processing, production machine automation with online job cards, and dispatch management.

**1. Client Order Processing:** When an order is received, it is logged into the system. The order sheet captures the predefined product details, and any customization requirements are noted. The system automatically calculates the order quantity in meters and converts it into kilograms for production planning.

**2. Production Machine Automation with Online Job Cards:** The system generates multiple job cards for each order based on the product type and quantity. For example, if an order for Product X is received for 400 meters, the system calculates that it can be completed using three different machines. The job cards specify the number of cycles required for each machine. For instance, a 25 kg machine needs to run three times, a 10 kg machine needs to run twice, and a 5 kg machine needs to run once to fulfill the order. Each cycle triggers the creation of a new job card, ensuring a smooth production flow.

**3. Dispatch Management:** Once a job card is completed, the product undergoes a pre-delivery inspection (PDI) to ensure quality standards are met. After successful inspection, the product is dispatched to the customer.

## Result

The implementation of factory automation systems brought significant improvements to KTL Industries' operations. The key results achieved include:

- 1. Improved Efficiency:** Automation eliminated manual data entry and reduced errors, resulting in improved efficiency throughout the order processing, production, and dispatch workflows.
- 2. Faster Turnaround Time:** Automated job card generation and machine scheduling minimized production delays, enabling faster order fulfillment and timely dispatch.
- 3. Enhanced Accuracy:** The automated calculations for order quantities and machine cycles eliminated the risk of human errors in calculations, ensuring accurate production planning.
- 4. Streamlined Operations:** The integrated automation system facilitated seamless coordination between different departments, allowing for better collaboration and smoother workflows.

## Conclusion

By implementing factory automation systems for client order processing, production machine automation with online job cards, and dispatch management, KTL Industries successfully addressed their operational challenges. The automated solution brought numerous benefits, including improved efficiency, faster turnaround time, enhanced accuracy, and streamlined operations. With these advancements, KTL Industries has positioned itself as a more competitive and customer-centric manufacturing company in the industry.

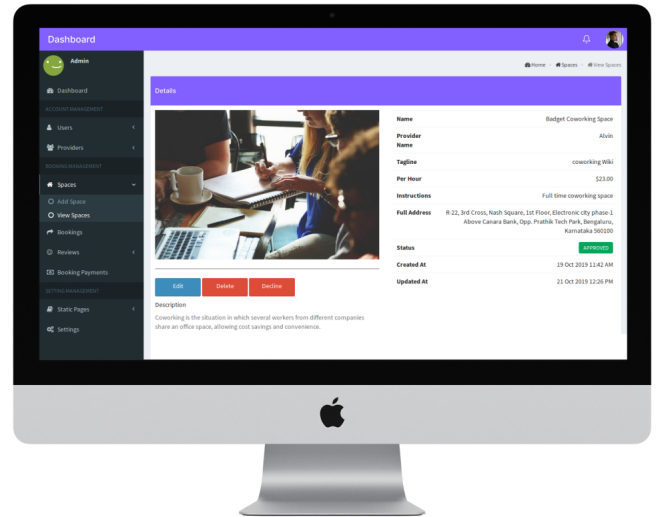

# 10 CASE STUDY

## 4 WORK: COWORKING

### Project Type:

Development of a Coworking Space Booking and Management System

### Technologies used

[Full View](#)

## Company Overview

"4 Work" is an up-and-coming coworking space company that has rapidly grown due to its unique approach to shared office spaces. It aims to provide convenient and flexible workspace solutions for freelancers, entrepreneurs, and small to medium-sized enterprises. With a growing network of spaces in major cities across the country, 4 Work is dedicated to offering productive work environments that foster community and collaboration.

### Project Overview

With the company's rapid expansion, managing bookings, customer services, workspace maintenance, meeting rooms, and auxiliary services such as IT and electrical assistance became increasingly complex. To address this, "4 Work" recognized the need for a comprehensive booking and management system that could centralize operations, elevate customer experience, and provide a scalable solution. This resulted in a project that developed a customer-facing booking app and a web-based admin and sub-admin portal.

## Problem

Before the project's inception, "**4 Work**" relied on disparate, manual processes for bookings, customer inquiries, space management, and other services, leading to operational inefficiencies, potential errors, and inconsistent customer service. The lack of a real-time overview of workspace occupancy, meeting room availability, and service requests complicated the task of optimizing resources and services.

## Solution

4 Work engaged a reputable software development firm to create a robust booking and management system. This system included a customer-centric booking app, an admin portal, and a sub-admin portal.

1. **Customer Booking App:** The app, designed with a user-friendly interface, allowed customers to view real-time availability of workspaces and meeting rooms, make bookings, process payments, and even request additional services such as IT or electrical assistance. Features like personalized recommendations, past booking history, and real-time notifications enhanced the user experience.
2. **Admin Portal:** The web-based admin portal facilitated a comprehensive view of all coworking spaces. It offered real-time data on space utilization, revenue, customer feedback, service requests, and meeting room bookings. Features for managing pricing, promotions, and consolidated billing for services were also integrated.
3. **Sub-Admin Portal:** Designed for local managers, the sub-admin portal provided capabilities to manage workspace inventory, daily bookings, customer issues, and service requests. It offered a localized view to handle the day-to-day operational tasks effectively.

## Result

The integrated booking and management system brought a paradigm shift in operations at 4 Work. It eliminated administrative redundancies and reduced the potential for errors, enabling the team to dedicate their efforts to service enhancement. Real-time data reporting and analysis facilitated informed decision-making at both operational and strategic levels.

For customers, the streamlined booking process and additional service requests system led to heightened satisfaction and a marked increase in bookings. The scalability of the solution ensured it could grow effortlessly in line with "4 Work"'s expansion, maintaining operational efficiency.

## **Conclusion**

The successful development and deployment of the comprehensive booking and management system at "4 Work" underscored the transformative potential of digital solutions in optimizing operations, enhancing customer experience, and fostering growth. By identifying a pressing operational challenge and investing in a custom-made, robust solution, "4 Work" has fortified its standing as a leading coworking space provider. The booking and management system continues to be an essential tool in their growth strategy, reinforcing their commitment to customer satisfaction and operational excellence.

## TESTIMONIALS

**RAMANDEEP SINGH**

JUNEJA FINANCE

"Kudos to Ebslon Infotech! Their CRM system has my team feeling like superheroes. Our clients adore the new features. High fives all around!"

**RAHUL ARORA**

KTL

Our manufacturing processes have never been more streamlined. Ebslon Infotech's tailored Manufacturing ERP solution has become the cornerstone of our production efficiency and quality control.

**NAVEEN PANWAR**

MAGNETI MARELLI

We were looking for a custom PDI solution that could cater to our complex product line. Ebslon Infotech proved to be the perfect partner in designing an PDI system tailored to our specific needs. The seamless integration with our existing systems was impressive, and the post-implementation support has been exemplary.

**HEMANT GUPTA**

QCW

Choosing Ebslon Infotech Pvt. Ltd. for developing our Online Exam Portal was one of the best decisions we made. The portal is aesthetically pleasing and functionally sound, catering to all the requirements we had in mind.

# OUR PROCESS

At Ebslon Infotech Pvt. Ltd., we follow a systematic process to ensure successful project delivery.
